Sql error 80004005

Sql error 80004005

I am seeing this in several situations and it is intermittent in our web based application connecting to **SQL** 2008 R2 serve back end. Users are coming. Microsoft's **SQL** Server development team gives three reasons why you might receive this **error** message. **Error Code 80004005 - Unspecified Error**
Troubleshooting Code Error 80004005 - Unspecified Error.
Think of **error 80004005** as meaning the script could not access your data. An application that has been working without problem (and has not had any active development done on it in about 6 months or so) recently began failing to.
