Debug for runtime error

Debug for runtime error

Hello, We have a VB6 program being run on a machine in our office - all of which run Windows XP Professional. It has worked up until a few days ago however now we are.

Runtime error. When programming we use a language to speak to the computer. That language has syntax. If the rules of the syntax are broken, then the compiler. Got a problem: When I open more than 1 spreadsheet I get the **Runtime error '9':Subscript out of range error** message. It does not happen opening just Hi, When i view my report got this **error, runtime error '94'** invalid use of null, but my database all have data?? if i

use 'on **error** resume next' will blank report.
